CS for All RPP Proposal Resubmission
REFINING YOUR PROBLEM STATEMENT

1. Describe the "problem of practice" your project seeks to address. Imagine this is the opening sentence of your proposal. The connections to equity in CS education should be clear.

2. How do you know this is a problem? What data (and/or references to the research literature) do you have to substantiate this "problem of practice" as a pressing issue of equity? (Its scope, its depth, its causes…)

3. **Who else is doing work related to this problem of practice? How you're your project (a) build on this work and (b) differentiate and add to understanding of this problem?**

4. **Who else has a stake in addressing this problem in your community? What aspects of the problem are they particularly interested in, where they might play a role?**
